Akva Line™ Waterborne Pigmented Finishes

Becker Acroma

# Akva Line™

## Waterborne Pigmented Finishes

As a leader in innovative water based wood finishing products, Becker Acroma provides durable and smooth pigmented products with the look of a traditional lacquer. Our Akva Line waterborne finishes are suitable for most wood substrates as well as MDF. With lower VOCs and water-reduction and clean-up, Akva Line lacquers have lesser impact on the environment than traditional solventborne finishes.

### **Laqva Top™ Pre-Catalyzed White Waterborne Topcoat — EG5800013**

A water-based acrylic pigmented topcoat suitable for most interior wood applications, Laqva Top Pre-Catalyzed White is a fast drying product with a very smooth feel. Laqva Top is one component and non-yellowing, with high solids that provide excellent hiding properties. When combined with one of Becker Acroma water-based primers, Laqva Top provides a formaldehyde hazard free and HAPs-free coating system that will meet KCMA testing criteria.

### **Akvasurf™ Pre-Catalyzed Waterborne Primer — ED5561001**

Fast drying with good flow and filling properties, Akvasurf Pre-Catalyzed Waterborne Primer is a high solids primer that sands much like a lacquer-based primer. Akvasurf Pre-Catalyzed Primer is most often topcoated with the Laqva Top Pre-Catalyzed Topcoat or Laqvin Topcoat, but Akva Line waterborne clear topcoats and several of the Becker Acroma acid cured topcoat products can also be used as the finish coat. Akvasurf has extremely low VOCs, and is HAPs-free and formaldehyde hazard free.

### **Akvaboard™ Waterborne Primer — ED5201001**

A fast drying waterborne primer that is designed for spray, curtain coater, or vacuum applications, Akvaboard Waterborne Primer is an easy-to-sand, high solids product with excellent adhesion. It can be used as a primer over 100% UV sealers, and can be topcoated with Aqualight waterborne UV and several Becker Acroma acid cured finishes. Akvaboard has extremely low VOC's, and is HAPs-free and formaldehyde hazard free.

### **Laqva™ Prime White Primer — ED5563001**

A fast-drying and cost-effective waterborne primer, Laqva Prime White has high solids to allow for quick filling of the substrate and more efficient preparation of the surface. The dry time on Laqva prime is comparable to many of the solvent based products on the market, and the efficient sandability makes the transition from solventborne to waterborne easier.
