 Becker Acroma

Aqualight™

Clear Waterborne UV

An innovative combination of UV and waterborne technologies, Aqualight is unique among UV product offerings. With simplified handling, efficient dry-time, and the excellent durability of UV technology, Aqualight provides manufacturers with consistently beautiful, strong and resistant finishes.

Aqualight Clear Waterborne UV - WM5970

Aqualight Clear Waterborne UV is a unique monomer-free combination of UV and water-based technologies, blending the benefits of traditional UV technology with the environmentally-preferable ease of water-based finishing. Extremely low in VOC, formaldehyde hazard free, and HAPs-free, Aqualight helps finishers meet even the most stringent environmental regulations.

Aqualight Clear Waterborne UV provides finishing benefits with a faster flash-off time prior to UV exposure. It can also be easily used over a broad range of substrates – profiled or planar – for the full range of wood finishing needs.

Like traditional UV technology, Aqualight Clear Waterborne has excellent scratch and chemical resistance properties and is extremely durable. An excellent choice for stained and natural woods, Aqualight has outstanding clarity for a beautiful finish.

Aqualight Clear Waterborne UV

- Tough but Flexible
- Scratch and Chemical Resistance
- Extremely Low VOC and is HAPs Free
- Excellent Clarity
- Formaldehyde Hazard Free
