Pre-Catalyzed Pigmented Primers

Becker Acroma

Pre-Catalyzed Pigmented Primers

Pre-catalyzed pigmented primers from Becker Acroma are developed for use under Becker Acroma pre-catalyzed pigmented topcoat finishes, and are suitable for application on most interior wood and MDF substrates. With high solids, these primers are formulated to provide excellent filling and easy sandability. Like the pre-catalyzed pigmented topcoats, these primers can enhance process efficiencies with easy application characteristics, fast dry times, and a long pot life.

Ultra Hide™ White Pre-Catalyzed Primer – ND5203001

A high hiding primer suitable for MDF and other woods, the Ultra Hide has increased solids to provide excellent fill properties. Easy to apply, this primer has fast dry times and excellent sandability. Ultra Hide White Primer can be topcoated with Becker Acroma pre-catalyzed pigmented topcoat lacquers.

- Easy to Apply
- Excellent Sandability
- Dries Fast
- High Hiding Properties

White Pre-Catalyzed Primer Filler – ND5202001

A one-component white nitrocellulose primer / undercoater suitable for MDF and other woods, this base coat has superior fill properties that provides an excellent foundation for Becker Acroma pre-catalyzed pigmented topcoat lacquers.

- Easy to Apply
- Excellent Sandability
- Dries Fast
- Superior Fill Properties
