Becker Acroma

Waterborne Stain Solutions

A leader in the development of innovative water-based finishing solutions, Becker Acroma provides the full compliment of waterborne products to meet the needs of industrial wood finishers. An entire system solution, Becker Acroma offers several water-based stain options.

Finishers choose water-based finishing options for a variety of reasons. Whether customer preference or environmental restriction, choosing waterborne finishing solutions should never require sacrifice. In addition to the full range of water-based topcoats and sealers, Becker Acroma provides water-based stains to meet the many needs and applications of industrial wood finishers.

Available in both a spray stain and wiping stain, the application characteristics of both products are very forgiving and enable the development of deep, dark colors in one application. These stains provide excellent grain definition and lie down evenly with minimal grain raise. Formulated for a very fast dry time that allows finishers to quickly apply the seal coat after stain application, these stains also provide the added flexibility of being used underneath Becker Acroma waterborne or solvent-based coatings.

Formulated for a range of tinting options, these stains are also available in six waterborne pigmented stain bases that can be intermixed to achieve a wide range of custom colors.

Waterborne Spray Stain ES5160000 is a Spray Only stain base also referred to as Spray No Wipe stain base.

Waterborne Wiping Stain ES5600000 is formulated with a longer open time for both wiping application or spray and wipe application.

- Bright, Clean Colors
- Does not hard settle, very easy to mix
- Excellent Grain Definition
- Formaldehyde Hazard Free
- Easily Create 100's of Custom Colors
- Deep, Dark Colors in One Application
